3. HAZARDS IDENTIFICATION

• Kings Mountain mica is an inorganic mineral. It is an abundant silicate comprising many inorganic elements. It may contain a small amount of crystalline silica (Quartz). Typical levels may vary between 0.1% to 5%

• CARCINOGENICITY: This product contains crystalline silica. Repeated, prolonged inhalation of dust may cause delayed lung injury which may result in silicosis or pneumoconiosis. The International Agency For Research On Cancer in its publication, “IARC Monographs On the Evaluation Of The Carcinogenic Risk To Humans – Silica, Some Silicates, Coal Dust and Para-aramid Fibrils” - Volume 68, 1997, has concluded that there is sufficient evidence of the carcinogenicity of crystalline silica in humans, and has, therefore, classified crystalline silica in, Group 1, Carcinogenic to Humans. The National Toxicology Program’s (“NTP’s”) Ninth Annual Report on Carcinogens 2000, lists crystalline silica (respirable) as a substance which is known to be a human carcinogen. In humans, a number of studies have found an association between lung cancer and exposure to dust containing respirable crystalline silica. In many of these studies, though not all, lung cancer risks were elevated and could not be explained by confounding factors such as cigarette smoking or arsenic or random inhalation. While the IARC working group concluded there was sufficient evidence in humans for the carcinogenicity of inhaled crystalline silica in the form of quartz or cristobalite, it noted that carcinogenicity in humans was not detected in all circumstances studied.

• Note: The state of California requires the following statement:
  “Airborne particles of respirable size of crystalline silica are known to the State of California to cause cancer”

Controlled average exposures over a working day to 3 mg/m³ of respirable dust or less should be adequate to protect employee’s health. Brief or occasional exposure should not cause any more concern than would exposure to other relatively inert dusts.

4. FIRST AID MEASURES

No special procedures are required. Some eye, mucous membrane and skin sensitivity may occur with allergic individuals. First aid consists of washing away dust. In case of discomfort by dust, move to a ventilated area and consult a physician.

Eyes: Wash eyes with large amount of water or saline solution. If irritation or redness develops, get medical attention.

Ingestion: Give large quantities of water to induce vomiting, keep head lower than hips to prevent aspiration. Get medical attention.

5. FIRE-FIGHTING MEASURES

Mica is inert and non-flammable.

6. ACCIDENTAL RELEASE MEASURES

Mica waste is non-reactive, non-flammable, non-biodegradable. Use conventional means for clean-up; e.g. sweeping, vacuum, etc. Use caution on wet floor, as it may be slippery.

7. HANDLING AND STORAGE

Avoid dust formation. Keep container tightly closed.

8. EXPOSURE CONTROL/PERSOAL PROTECTION

OSHA PEL ACGIH TLV
Mica: 20 mppcf (3 mg/cu. meter) (Respirable) 3 mg/cu. meter (TWA-8 Hours Period)
