

PRODUCT PROFILE

HI FIBE 2000

DESCRIPTION

HI FIBE 2000 is an extremely flexible, high strength polymeric fibril that is used as an asbestos replacement. Because of the fibrillated structure, HI FIBE 2000 functions to increase viscosity, slump resistance and crack resistance in oil or water based systems. It is inert with outstanding biological, chemical and environmental resistance. HI FIBE 2000 is a uniform product offering good dispersibility, very low shrinkage on drying, and airless sprayability. In many applications HI FIBE 2000 can replace asbestos at one-tenth the asbestos concentration.

APPLICATIONS
